

# JumpCloud Asset Management

**JumpCloud Asset Management** enables IT admins and managed service providers (MSPs) to effortlessly track, manage, and report on organizational assets from laptops and desktops to peripherals within a unified, intelligent platform.

## Full Visibility and Control Over Every Asset

### Automate and Centralize Asset Inventory

Automatically sync JumpCloud-managed devices and use Apple Business Manager (ABM) for zero-touch discovery. View complete hardware, purchase, and status details instantly. For unmanaged assets, ensure full coverage by easily importing via CSV, API, or use the Clone Asset feature to accelerate manual entry.

### Accelerate IT Operations

Leverage historical change data to accelerate issue resolution and locate assets instantly with Global AI Search. Simplify workflows with the AI-powered filtering widget, using natural language to isolate devices (e.g., "active warranty in NY"), while seamlessly synchronizing devices from procurement channels like ABM.

### Optimize IT Budgeting

Track costs, depreciation, and warranty status to optimize spend. Gain instant visual insights via the Overview Dashboard and securely store invoices directly on asset records using File Upload. This visibility prevents over-purchasing and ensures cost efficiency across the lifecycle.

### Stay Compliant

Generate reports effortlessly or use AI-driven search to query custom fields in real-time. Export your full inventory with status details for compliance reviews. Maintain a detailed historical trail of changes per asset to ensure you are always audit-ready.

## Key Features

- Automated Sync with JumpCloud Devices:**  
Instantly pull data from JumpCloud-managed devices and procurement channels (ABM) for accurate, aligned inventory.
- Unified Asset Inventory:**  
Maintain visibility over all assets, including accessories and unmanaged devices. Import via CSV, API, or use Clone Asset for rapid manual entry.
- Asset Lifecycle Tracking:**  
Tailor records to your processes, update attributes en masse via Bulk Actions, and keep device statuses automatically updated with JumpCloud Device Management.

- Audit-Ready Change History:**  
View and export a complete log of all changes per asset and securely store financial documents directly on the record with File Upload.
- AI-Powered Discovery:**  
Locate, filter, and act on asset data with global AI Search and the AI-powered filtering widget.

The screenshot shows the JumpCloud Asset Management interface. The left sidebar includes sections for RADIUS, SSO, Password Manager, Device Management (Devices, Device Groups, Policy Groups, Commands, MDM), Asset Management (selected), Directory Integrations (Active Directory, Cloud Directories, HR Directories, Identity Providers), Security Management (Conditional Policies, MFA Configurations, SaaS Management), and Insights (Live Chat, Settings). The main content area displays the Asset Management dashboard with sections for Highlights, Devices, Groups (6), Applications (10), Assets Owned (9), and Directory Activity.

JumpCloud® is the AI-powered unified IT management platform designed to secure the modern workforce. By consolidating identity, device, and access management, JumpCloud provides intelligent, secure IT that scales from human users to autonomous AI agents. We help organizations around the globe eliminate complexity and turn AI risk into an optimized advantage, ensuring the right people and agents have secure access to the right resources at all times.
