

JumpCloud AI Assistant

JumpCloud AI Assistant is the conversational partner for Intelligent IT, automating operations across identities, devices, policies, applications, and assets directly within the Admin Portal. It translates natural language into secure, verified execution, replacing the friction of navigating multiple pages with intuitive chat that helps teams work smarter, faster, and with greater confidence.

Conversational Control for IT

Unified, Intelligent Operations

List, search, and manage users, devices, apps, and assets within a single conversational interface. Eliminate complex navigation by retrieving details and executing context-aware actions directly in chat, leveraging platform-wide reasoning to drive precise results and reduce manual workflows.

Faster, Simpler Operations

Common tasks like resetting passwords, suspending users, managing MFA, running commands, or locking or erasing devices can be completed in seconds, cutting down on repetitive manual work and reducing response times across IT operations.

Adaptive AI Artifacts & Bulk Actions

Artifacts transform traditional object pages into interactive, AI-generated workflows that surface context and the recommended next steps. Turn these insights into scalable execution by selecting multiple users or devices to apply actions instantly, streamlining tasks without repetitive manual effort.

Safe and Controlled Actions

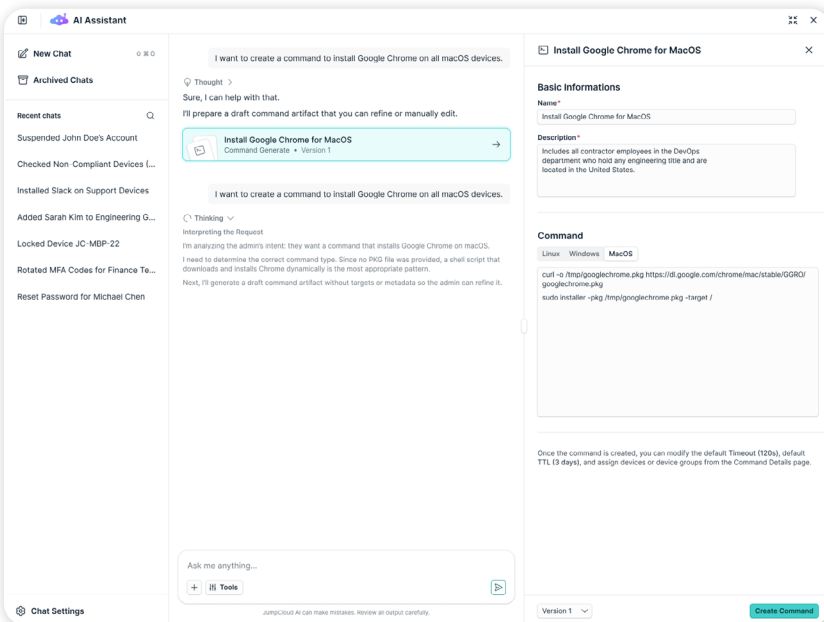

All sensitive or potentially destructive actions require confirmation prior to execution. The AI Assistant accelerates IT workflows while preserving administrative control and compliance standards.

Key Features

- **Conversational Admin Interface:** Conversational management of users, devices, applications, policies, commands, and assets directly via chat.
- **Secure Execution:** Secure execution of user and device actions with confirmation controls.
- **Bulk Operations:** Multi-object selection for bulk operations and contextual insights.
- **Dynamic Groups:** AI-generated dynamic user and device group creation.
- **Command Workflows:** AI-powered command generation, validation, and execution workflows.
- **Adaptive Artifacts:** Interactive AI artifacts embedded within object views for actionable guidance.
- **Cross-Domain Intelligence:** Cross-domain reasoning across core JumpCloud surfaces.
- **Audit Visibility:** Integrated directory insights and audit visibility.

Need Help Getting Started?

JumpCloud's Professional Services Team is here to support you along the way. Whether you need implementation assistance or hands-on engineering support, there's a service package for you.
